

Apstec to expand launch of new solution at Milipol Paris

October 30, 2023

Apstec Systems has confirmed plans to expand the launch of its new smart screening solution – the Human Security Scanner (HSS) Falcon – at Milipol Paris, France.

The technology is capable of screening people, hand-carried bags and cabin-sized luggage for explosives.

HSS Falcon

The new solution automatically detects explosives, weapons, pyrotechnics, narcotics and cash.

Streamlining the screening process of large numbers of people and their belongings, HSS Falcon is ideal for deployment during operations at difficult-to-secure crowded venues.

For example, mass transport, sports stadia, major events as well as customs and border agencies.

According to Apstec, the mobile solution fits easily and unobtrusively into the customer environment and can be rapidly deployed for indoor or outdoor use – independent of infrastructure.

“Proportionate and cost-effective”

“We are thrilled to be expanding the launch of HSS Falcon at Milipol Paris and looking forward to meeting customers and partners to introduce this revolutionary technology,” said Stephen Cooper, COO, [Apstec](#).

“Organisations and government agencies from around the world have been searching for practical, proportionate and cost-effective screening solutions for some time.

“In HSS Falcon, we are delivering the next generation screening technology the market has been waiting for; it is cost-effective, deployed in minutes and has the ability to detect threats unlike any other technology,” added Cooper.

Milipol Paris

Visitors to Milipol can visit Apstec on Stand 5A P200, where it will be demonstrating the HSS Falcon.

Apstec’s Partner, LABCOOR, will also be showcasing its exciting mobile access control solution that delivers seamless security anywhere.

The event, dedicated to homeland security and safety, is set to welcome over 30,000 visitors and 1,000 exhibitors from the 14-17 November.
